4.61.5

Release Notes - Webdesk - Version 4.61.5 - October 24, 2025

Improvements

Event Management

- [WD-19093[1]] - Deleting events is now only possible for users with the new role EvmEventSystemAdmin to avoid accidental deletions.
- [WD-19094[2]] - The status values DRAFT and RESERVED were clearly distinguished from each other to improve user guidance during event creation.

User Interface & Design

- [WD-18722[3]] - The colors of help, success, and error messages were moved into the central design theme and can now be configured via CSS variables.

Bug Fixes

Issues in Travel Expense Reports

- [WD-19622[4]] - In the "Entries" tab of the travel expense report, the last region of the day was always preselected and could not be edited. The selection options now correctly depend on the respective travel day.
- [WD-19557[5]] - On mobile devices, the per diem rate in the travel expense form was awkwardly wrapped. The display has been optimized.

Improvements in Project Management

- [WD-19605[6]] - An error message occurred when creating subprojects if the parent project had permissions.
- [WD-19607[7]] - The disabled search button in the project navigator looked wrong when editing a project.

System Stability and Background Bug Fixes

- [WD-19611[8]] - Fixed a rarely occurring error message when starting a connector.
- [WD-19618[9]] - An error message occurred when updating a person with an empty taId.
- [WD-19609[10]] - A faulty license definition for the RP-Birt (Reporting) module caused a false license violation error message.

User Interface

- [WD-19574[11]] - In the weekly program view, the help text was not readable after saving due to a faulty color scheme.
