4.61.9

Release Notes - Webdesk - Version 4.61.9 - November 6, 2025

Bug Fixes

- [WD-19696[1]] - An error message occurred when saving an already created event again in the EventAssistant. This issue has been fixed.
- [WD-19711[2]] - An error message occurred when saving a rescheduling in on-call duty. The cause was a faulty query and has been corrected.
- [WD-19701[3]] - The visibility of the live chat widget was not retained correctly after a page reload or when navigating via the compact menu. The state of the widget is now saved reliably.
- [WD-19710[4]] - Opening the "Calendar Overview" report caused an endless loop with changing background colors. The behavior has been corrected so that the view now loads properly.
- [WD-19699[5]] - Calling the method for checking the journal approval caused an error due to non-serializable parameters. The serialization was adjusted to restore the function.
