4.62.5

Release Notes - Webdesk - Version 4.62.5 - January 8, 2026

Bug Fixes

Time & Attendance

- [WD-19859[1]] - Fixed a display error in the time tracking settings: buttons are now displayed correctly behind the modal window.

Interfaces

- [WD-19894[2]] - Previously, faulty or unknown email addresses led to error messages that quickly filled the log files. This behavior has been optimized: instead of an error message, a warning now appears indicating that the email address stored in the person settings was not found.
