4.64.14

Release Notes - Webdesk - Version 4.64.14 - July 6, 2026

Improvements

Interfaces

- [WD-19581[1]] - The button for opening the logs after starting a job now opens the log file in a new tab to allow easier comparison of different job runs.

Other Improvements

- [WD-21235[2]] - Automated cleanup and standardization of Java imports to improve code quality and reduce manual rework.
- [WD-21188[3]] - The logging of expected access violations and 404 error messages was improved so that these entries are no longer logged as errors, which makes the error logs easier to read.

Bug Fixes

Project Time Tracking

- [WD-21268[4]] - Fix for an issue where the favorites manager displayed the favorites of a wrong person and the scroll position was not reset.

Travel Expense Tracking

- [WD-21099[5]] - Fix for an issue where additional fields were displayed for new travel expenses even though their assignment to the receipt type was no longer valid.

HR Expert

- [WD-21192[6]] - The saving and loading speed in the payroll area was significantly improved, so that processing is noticeably faster, especially for larger companies with many employees and wage types.

Reporting

- [WD-21266[7]] - Optimization of the annual working time report: in the allocation view, terminated organization groups are no longer evaluated unnecessarily.

User Settings

- [WD-21283[8]] - Fix for an issue where an error message was displayed when resetting a password or 2FA for persons that had not yet been saved.

Administration

- [WD-21280[9]] - Fix for an issue where the automated PreloadUserData job could fail when run per client.

Mobile App

- [WD-21297[10]] - Fix for a display issue where warning messages on mobile devices were unreadable, cut off, or could not be closed.

Login / Logout

- [WD-21312[11]] - Fix for an issue that prevented login over unsecured HTTP connections when using Redis session management.
- [WD-21166[12]] - Fix for an issue where the "Stay logged in" option was not preselected correctly when the login page was accessed again, even though the corresponding cookie was set.

Performance

- [WD-21289[13]] - Improved logging behavior: connections aborted by the client during transmission are now logged only as a warning and no longer as an error with a detailed log.

Other Bug Fixes

- [WD-21109[14]] - Fix for an issue where sorting by requester in the task list no longer worked correctly.

Miscellaneous

- [WD-21290[15]] - Addition of a help text for the "Notify Author" field in the simple process editor for better user support.
- [WD-21277[16]] - Optimization of cache replication through the introduction of individual replication modes per cache area to reduce unnecessary network traffic.
