Statistics

The **Statistics** menu item provides an overview of any time accounts, such as the development of the balance and of overtime.
With this menu item, employees in a management role have the option to monitor these accounts of their employees.

By selecting a department and clicking the Query button, the monthly statistics of the desired department or of the persons selected from the favorites list are displayed (see chapter **Management**).

The following fields are available in the search mask:

- **Year**: year for which the statistics are queried
- **Account**: one of the configured time accounts or **All**
- **Observation period**: **Calendar year** or **Last 12 months**; depending on the configuration, a further, specifically named observation period is available
- **Direction**: Forward or Backward

An **average** can also be displayed for the individual months (darker column). The average column is only displayed with the direction **Forward**.
