Vehicle Management

Vehicles are used for mileage allowance and the mileage log. The vehicle master data and assignments control which vehicles users can select in a trip type.

Vehicle master data

- **Type, make, model:** designation of the vehicle.
- **License plate:** identification of the vehicle.
- **Number of seats:** available seats.
- **Fuel type:** for classification of the vehicle.
- **Private car:** distinguishes private from non-private vehicles and influences the mileage allowance logic.
- **Climate-friendly:** additional classification for evaluations or business rules.
- **Client and Valid from / Valid to:** organizational and temporal scope.

Assignments

- Assign persons directly.
- Assign the vehicle to a client or a group.
- If needed for groups, enable inheritance to subgroups.
- Use the option to assign the vehicle to all persons within the selected client only deliberately.

Notes

Vehicle type and private car must match the mileage allowance definition[1] used. Changes to the license plate or assignments affect selection and evaluations. For a historical vehicle change, use a new validity period and then test a mileage and mileage log case.
