Jobs

The following jobs are used in the Scheduling module:

- **createRsTypeObjectsBasedOnGroups** [1]
  (configurable): can initially create RS scheduling objects (based on hierarchical and/or non-hierarchical groups). In the configuration, the category name can also be specified in addition to the selection of groups (e.g. "Floater duty").
- **informAboutReschedulings** [2]
  (configurable): enables active notification of rescheduled employees by email, workflow entry, or GW reminder entry
