## KorrClient\_04\_TimeBase\_Kontokorrekturen

## Account corrections (absolute + relative)

As mentioned above, account corrections can also be made (in the day view).

WARNUNG

**Important: Account corrections** can only be made in the **daily view**. They always apply as of the key date (the key date always corresponds to the day currently selected)!

The change can be both absolute (e.g. Input of 5 as remaining vacation - sets the remaining vacation to 5 days, no matter which value was posted to the account so far) as well as relative (e.g. Enter +10 as Remaining vacation - sets the remaining vacation to Remaining vacation old +10 days = Remaining vacation new).

Correct account	Absolute correction	Relative correction

The account is changed to the value entered after entering a number and clicking the Save icon.
