R3.5.1

The following is a list of tickets exported from our release management system Jira and assigned to the release described:

Bug

- [WD-355[1]] - Problem with statistics on internal Webdesk
- [WD-454[2]] - The bottom list item is not fully visible in the selection dialog
- [WD-478[3]] - The synchronization with TmTravelConnector aborts with an exception
- [WD-597[4]] - Problem with time correction - minute sequence
- [WD-611[5]] - Webdesk Wf-Impl sometimes returns wrong entries for getActivityInstance() from cache.
- [WD-645[6]] - BTV: Performance problems in the group calendar when an absence reason was entered in a certain way (in the 6020)
- [WD-647[7]] - Small booking screen no longer works with IE -> algorithm acting up.
- [WD-657[8]] - Business trip: Additional fields - ClassCastException when calling a Boolean additional field
- [WD-693[9]] - An already deleted action referenced in the context menu of a workflow process leads to NPE
- [WD-696[10]] - Removing inline CSS rules via JavaScript sometimes fails.

Improvement

- [WD-496[11]] - Font size of absence reason buttons in booking screen
- [WD-503[12]] - TaCon: Monitoring option via JMX

Task

- [WD-664[13]] - Improvement of DeleteableExpression in tm_editAdditionalField.act
