Application Header

The Application Header is the bar at the very top of the application screen. By default, the header contains the menu button and the link to the system menu.

Special types of notifications can also be displayed in the header.

Home Button

Clicking the Home button navigates the user to the home page of the application.

The Home button is the first entry in the menu, directly below the search function.

Menu Button

Clicking the Menu button changes how the menu is displayed.

Depending on the device used, the main menu can be displayed or hidden, enlarged or reduced.

System Menu

The system menu can be opened by clicking the arrow icon at the top right of the header. It contains system-specific actions such as version information, the link to the settings, and optionally the option to switch to other users or to log out of the application.

Unread Notifications

A special icon/image that informs the user about unread notifications. It is located in the header next to the system menu link.

If there are unread notifications, their number is displayed. Clicking the icon navigates the user to the "Open tasks" page.

The icon is always visible. Clicking the icon opens the dropdown with the number of unread notifications.
