Webdesk

Webdesk menu

Webdesk EWP is the entry point to Personalwolke for every authorized user. The menu items offer exactly those functions that the respective user needs in their professional context (i.e., according to their role).

Depending on the role assigned during the creation process, the available menu items therefore differ!

Further information can be found here[1].

Webdesk user interface

Webdesk is currently offered in two different user interfaces (synonyms: appearances, skins, themes). Both interfaces offer the full range of functions; appearance and menu navigation differ in part.

The **classic** design was designed for the PC.

Responsive is a modern design that adapts dynamically to the type of device used, namely smartphone, tablet or PC (desktop).

Webdesk for Payroll Services

The menu and range of functions of Webdesk have been optimized for the use of payroll and social security notifications.

Every employee therefore finds various menu items in their Webdesk for viewing their earnings statements. They can also search for the released contact details of colleagues, and important policies and information can be viewed.

Webdesk EWP feature extensions through upgrade

The following additional modules of Webdesk EWP can be purchased for a fee from Workflow by upgrading to a Personalwolke.at subscription:

- Time management
- Project time tracking
- Travel management
- Personnel management (= HR-Expert full version)
- Rescheduling module
