Booking Form Solo

It is now possible to call up a special booking form that can be integrated into existing websites or started, for example, via an **autostart folder**. The purpose of the **booking form solo** is to let the user submit a booking.

The link for the booking window solo could look as follows, for example:

http://webdesk3/webdesk3/ta_doBooking.cact?layouttemplate=blankTemplate&showJournal=false

where the parameters can be set as follows:

URL: ta_doBooking.cact (or the URL of the desired booking configuration). If the unconfigured action ta_doBooking.act is called, the settings of the booking configuration (booking reasons, message, ...) are not applied.

- GET parameters:

layouttemplate=blankTemplate --> hides the header and menu tree

showJournal=false --> the link to the monthly journal is hidden --> useful because it cannot be displayed in a small window

NOTIZ

The former parameters closeAfterBooking (close the window after booking), resizeToW / resizeToH (window size), and showUser (display user name) are no longer supported and no longer have any effect.

1. http://webdesk3/webdesk3/ta_doBooking.cact?layouttemplate=blankTemplate&showJournal=false
