Project Time Tracking

The core functions of the Webdesk module **Project Time Tracking** are the extensive options for recording and evaluating your project times.

There are the following options for recording project times:

- **Live booking of project time via the "stopwatch function"**
  [1]Booking of project times as they actually occur, selection of project and activities, and recording with the Start/Stop button
- **Recording project times after the fact**
  [2]via the booking mask by selecting the date, start and end time as well as project and activity
- **Monthly project time entry**
  [3](if enabled) Distribution of the working time of an entire month across projects in percent or hours:minutes, instead of day-by-day recording

In addition, recorded project times can be **evaluated and displayed** in a customized way. There are numerous **filter and display options** for this.

- **Evaluating recorded project times**[4]
