

PTM - System Settings

Webdesk EWP provides various additional tools for further configuration and automation as well as for importing and exporting large amounts of data to and from the system:

- **System Parameters**

System parameters are settings that affect the basic behavior of Webdesk. Some parameters are fixed settings, while others can be overwritten by user-client or person-specific settings.

--> [overview of system parameters in the module "Projecttime"](#)¹

- **Jobs**

Jobs serve as periodically running auxiliary programs for synchronizing and processing data. Jobs can be started automatically with the help of a so-called trigger, which can be set e.g. daily, weekly, etc...

--> [overview of jobs in the module "Projecttime"](#)²

- **Connectors**

The connectors provide a framework for the import and export of data to and from webdesk.
--> **overview of connectors in the module "Projecttime"**³
