# PTM - System Settings

For further configuration and automation, as well as for importing and exporting large amounts of data to and from the system, **Webdesk EWP** provides various additional tools:

- **System parameters**
  These are basic settings that affect the fundamental behavior of Webdesk. Some parameters are fixed settings, while others are overridden by user-, client-, or person-specific settings.
  **--> To the available system parameters in project time tracking**
  [1] --> Further general information on system parameters[2]
- **Jobs**
  **Jobs** serve as periodically running utility programs for the synchronization and processing of data. Jobs can be started automatically using a so-called trigger, which can be set, e.g., to daily, weekly, etc.
  **--> To the jobs in project time tracking**
  [3] --> Further general information on jobs[4]
- **Connectors**
  Connectors provide a framework for the **import** and **export** of **data** in Webdesk.
  **--> To the connectors in project time tracking**
  [5] --> Further general information on connectors[6]
