4.15.7

Release Notes - Webdesk - September 24, 2020

Bug

- [WD-11769[1]] - Fixed the design of the pagination in the booking list so that it looks like buttons again

Improvement

- [WD-8285[2]] - Performance improvement in the Folder Explorer by loading only the visible elements. Subdirectories are only loaded when opened.
- [WD-11812[3]] - In the Folder Explorer, users now have full visibility of all their own folders, even if they have restricted permissions for certain folders. This means that for other employees they do not see the restricted folders, but for themselves they do.
