4.17.1

Release Notes - Webdesk - November 2, 2020

Bug

- [WD-11658[1]] - Fixed an issue where the cache of the CONFIGFILEs in a cluster system was randomly corrupted
- [WD-11822[2]] - Fixed a special case in the conversion and summation of industrial minutes in tables of server-side rendered reports
- [WD-11850[3]] - Fixed an error in the validation of overlapping trips
- [WD-11920[4]] - Fixed an issue where a device could be reserved even though it should not have been available (EVM)
- [WD-11922[5]] - Fixed an issue where all devices could be selected after changing the number of displayed entries (EVM)
