doRescheduling (scheduling action)

This action is the heart of the Scheduling module and can be used to create a configuration for a scheduling form. The Webdesk Planning module is very flexible and supports a wide range of use cases. For example, temporary persons can be assigned to other org units (floaters), scheduled for standby and on-call duty, or daily schedules can be rescheduled. Depending on the use case, the scheduling action must be configured correctly and integrated into the customer's menu tree.

General configuration

- Offer configuration as read-only
  - Yes - The configuration is in read-only mode and users cannot make any changes. Recommended, for example, for groups of people who should be able to view the schedule but not change it.
  - No - Scheduling is permitted
- Rescheduling structure
  - Selection of the appropriate scheduling structure
  - The scheduling structure determines whether you are scheduling assignments to org units, standby duty, or daily schedules
- Detail display
  - Presetting of useful detail information that is displayed per day by default
