

New Features

Extension of REST Endpoints

- [[WD-19502](#)¹] - A new REST endpoint allows retrieving persons filtered specifically by client_uid.

Invoice Automation

- [[WD-16924](#)²] - A dialog for adjusting the prices of cloud licenses was introduced to easily implement index-based price increases (e.g. inflation). The adjustment takes effect from a defined date and for selected licenses. The previous assignments are historized.

Improvements

Optimization of Settings and User Interfaces

- [[WD-19584](#)³] - Public fields in the "Time and Attendance" settings can now be deleted by the customer.
- [[WD-19588](#)⁴] - Field groups in the settings can now be collapsed to improve clarity.
- [[WD-19539](#)⁵] - The fingerprint tab is now only displayed if fingerprint data actually exists.

Dashboard Improvements in the Calendar View

- [[WD-19610](#)⁶] - Absences created via bookings (e.g. home office) are now also displayed correctly in the dashboard calendar.

Improvements in System Integration

- [[WD-19598](#)⁷] - The Microsoft Graph API used was updated to a newer version.
- [[WD-19625](#)⁸] - Webdesk now supports embedding in iframes of a different origin, through adjustments to the Content Security Policy, the framework conditions for SameSite cookies, and by avoiding direct references to window.parent.
- [[WD-16461](#)⁹] - The configuration of the 30-day trial form now automatically follows the selected region and loads the matching settings.

Bug Fixes

Corrections in Group and Person Management

- [[WD-19558](#)¹⁰] - The validity of groups is now more robust when adding persons with a retroactive validity date.
- [[WD-19535](#)¹¹] - Creating new field definition groups no longer causes an error message ("id to load required").
- [[WD-17943](#)¹²] - The creation of test accounts for Germany now correctly takes the configured retroactive period into account (PoTrialClientOptions.monthsInPastForValidityStart).
- [[WD-16925](#)¹³] - Fixed person creation in the HRX module.

Stabilization of the Webdesk User Interface

- [[WD-19550](#)¹⁴] - Removing a dashlet in HRX caused an error message on the subsequent layout change; this behavior has been corrected.
- [[WD-19573](#)¹⁵] - In the menu tree search, entries found (e.g. daily/weekly programs) are visually highlighted again in V2024.
- [[WD-19575](#)¹⁶] - The automatic initialization of "Webdesk Preloading Kiosk Project permissions" at system startup can now be disabled; this prevents unnecessary system load (e.g. during updates in environments without kiosk usage).

Bug Fixes in Time and Absence Management

- [[WD-19576](#)¹⁷] - Inconsistent values occurred when running the job with the parameter "daysInPast"; the underlying issue has been fixed.
- [[WD-17322](#)¹⁸] - TA fields are again correctly filtered based on the person's employment contract and legislation.
