

4.17.1

Release Notes - Webdesk - November 2, 2020

Bug

- [[WD-11658](#)¹] - Fixed an issue where the cache of the CONFIGFILES in a cluster system was randomly corrupted
- [[WD-11822](#)²] - Fixed a special case in the conversion and summation of industrial minutes in tables of server-side rendered reports
- [[WD-11850](#)³] - Fixed an error in the validation of overlapping trips
- [[WD-11920](#)⁴] - Fixed an issue where a device could be reserved even though it should not have been available (EVM)
- [[WD-11922](#)⁵] - Fixed an issue where all devices could be selected after changing the number of displayed entries (EVM)
