

Improvements

- [[WD-18604](#)¹] - The process names in the TO-DO dashlet of the TA dashboard were previously not displayed translated. They are now translated correctly and also support text modules directly in the dashboard.

Bug Fixes

Issues in Calendar Views

- [[WD-19402](#)²] - Under certain conditions, no groupware information was loaded in the group calendar. This led to an error message when opening the calendar.
- [[WD-19332](#)³] - The day detail view in the calendar did not take the defined *CalendarDetailTemplate* extension into account and therefore did not show extended information from processes such as travel requests.

Errors in Workflow Management

- [[WD-19242](#)⁴] - When filtering by processes in workflow lists, process definitions with the same ID but a different package were not displayed correctly. As a result, affected processes could not be selected.
- [[WD-19398](#)⁵] - An error message occurred when opening the HR Expert module as admin.

Travel Expense Reports

- [[WD-19322](#)⁶] - When creating a *tmtravelconnector* entry, the client selection was not taken into account in the data query. As a result, trips of all clients were transferred.
- [[WD-19449](#)⁷] - Switching to a trip type without per diems in an existing travel expense report could cause an error message under certain conditions.

Display on Mobile Devices

- [[WD-19372](#)⁸] - In the Android app (Capacitor version), the camera notch was not taken into account correctly in modal dialogs. As a result, the close button was partially unusable.
