Recording, Booking and Evaluation

The core functions of the **Project Time Management** module are the extensive options for recording and evaluating your project times.

There are the following options for recording project times:

- **Live booking of project time via the "Stopwatch" function**
  Booking of project times in the moment they actually occur, selection of project and activities and recording with the Start/Stop-Button
- **Recording of project times in retrospect**
  via the booking mask with selection of date, start and end time as well as project and activity data

In addition, recorded project times can be **evaluated and displayed** via a custom **configurable action**. For project time evaluations, there are numerous **filter and display options**.

- **Evaluate Recorded Project Time**
- configure your Project Time Evaluation
