

Connectors in Project Time Tracking

Connectors serve as a **connection of the system** to the outside and can considerably simplify working with large amounts of data, especially during configuration. For example, connectors can be used to **import** various data records such as persons, groups, or projects into the system or to **export** them to various formats.

The "**Project Time**" module offers the following connectors, which can be used:

- **Ptm Cost Object Connector**

¹ This connector makes it possible to export cost objects to a file or import them from a file.

- **Ptm Cost Object Effort Connector**

² With this connector, services already performed on cost objects can be imported into the system or exported to a file.

- **Ptm Effort Connector**

³ This connector makes it possible to export project times to a file or import them from a file.

- **Ptm Project Connector**

⁴ This connector makes it possible to export projects to a file or import them from a file.

- **Ptm Customer Connector**

⁵ This connector, as a linked connector, makes it possible to export the customers assignable to a project to a file or import them from a file.
