Ptm Project Connector

This connector allows **projects** to be exported to a file or imported from a file. The following fields should be mapped and connected:

$parentProjectCode	Code of the parent project
$structure	Project Structure to which the imported/exported project is/shall be assigned
$this	this option is developer-specific and currently not available for the standard administrator/user
$type	Element type of the project that is imported/exported
_importance	Possibility to insert information of configurable attributes (e.g. importance, cost factor, coffee break, etc...). The underscore character _ in before the text indicates that this is a freely selectable attribute.
_coffee break	--- // ---
_comment	--- // ---
allCustomersOfClientSelectable	true/false: are all customers of the respective client selectable to be assigned to this project?
bookable	true/false: Is the project bookable?
chargeable	true/false: Can efforts for this project be marked as chargeable?
code	Project Code
description	space for a detailed description of the project
effortChargeableByDefault	true/false: are efforts for this project marked as chargeable by default?
name	Name of the project
plannedEffort	planned & allocated hours of effort for this project
shortName	Short name of the project
totalPlannedEffort	planned & allocated hpurs of effort for this project including all its sub-projects
validfrom	date - project valid from
validto	date - project valid to

Felder

Name	Wert
