## **Module Project-Time**

The Webdesk EWP **module Project Time Management** enables the booking, recording and correction of **productive performance times** ("project times"). These booked time efforts can be related to real projects, internal activities, customers, cost centers or other categories.

The term "project" is broader here and can basically include **any service object** on which an employee's activity can be booked over time.

The primary goal of this module is the **simple and clear recording and evaluation** of productivity times. In Webdesk EWP, it is possible to record these productive (project) times using several variants:

- Daily, weekly or monthly recording of project time expenditure in hindsight
- **Real-time project time booking** (via "stopwatch")
- Automatic generation of project times from attendance bookings (for non-project-specific employees)

For the administrator, the following **questions** may arise in this module:

Organisation & Project Structure <sup>1</sup>	<b>Recording, Booking &amp; Evaluation<sup>2</sup></b>
How do I create new bookable projects? Which possibilities for configuring projects and structures do I have?	How do I book and record projects times in Webdesk EWP? How do I create reports and evaluations from booked project times? Can I also configure my own reports?
Permission Management <sup>3</sup>	System Settings in module Projecttime <sup>4</sup>
How do I assign access, evaluation and booking permissions for project time recording?	How do I change system parameters in project time recording? What options do I have to automate processes? (PTM Jobs) How can I easily import and export data? (PTM Connectors)
